

Mesh cable tray systems

Quick, safe and economical cable routing in professional electrical installations.

Quick. Screwless. Safe. Stable.

OBO Bettermann's mesh cable tray systems are the ideal basis for quick, safe and economical cable routing in all areas of professional electrical installations. The GR-Magic®, the Magic® G mesh cable tray, and the heavy-duty SGR mesh cable tray with their various shapes, side heights, surfaces and range of accessories are ideal for satisfying the most varied cable routing requirements. The systems are well thought through and extremely efficient when in daily use.

Installation time is an important factor when it comes to choosing whether to buy a product or not. With the GR-Magic® mesh cable tray in both the standard design or as a G mesh cable tray, OBO Bettermann can offer a true system innovation. Thanks to the connection system developed by OBO, the mesh cable tray can be mounted in a matter of seconds – without any connectors or tools. Just connect the two parts and you're done. The system has therefore redefined the concepts of rapid mounting and flexibility.

GR-Magic® mesh cable tray

G FT A2 A4

The GR-Magic® mesh cable tray really speeds up installation and manages this with no loss of stability and load-bearing capacity. The moulded connectors for screwless quick mounting ensure extremely quick installation times, even for complex mounting operations. Load tests show that GR-Magic® systems can fully match up to traditional screw connections.

The mesh cable trays are available with side heights of 35, 55 and 105 mm in the electro-galvanised "Titan look" version, hot-dip galvanised version and in stainless steel. The comprehensive range of practical accessories, such as mesh cable tray bends, hold-down clamps, quick connectors, barrier strips, suspension profiles, brackets, etc., ensures that the product range is complete down to the smallest detail.

Compliant with standards

The electrical properties are also first class: the values required by the VDE guidelines 0639 and in the new IEC/EN 61537 "Cable management. Cable tray systems and cable ladder systems" are achieved easily.

In addition, the system satisfies the stringent NEMA requirements for the American market.

Function maintenance with GR-Magic®

Besides rapid mounting and the wide range of applications, the GR-Magic® offers another key benefit: it can be used to maintain the electrical function for fire safety purposes in order to ensure the supply to safety-related systems for a certain period of time in the event of a fire. The GR-Magic®

has proven its stability in an impressive manner in fire testing according to DIN 4102 Part 12.

E30-E90

Tested and approved cable system with the maintenance of electrical supply according to DIN 4102 Part 12

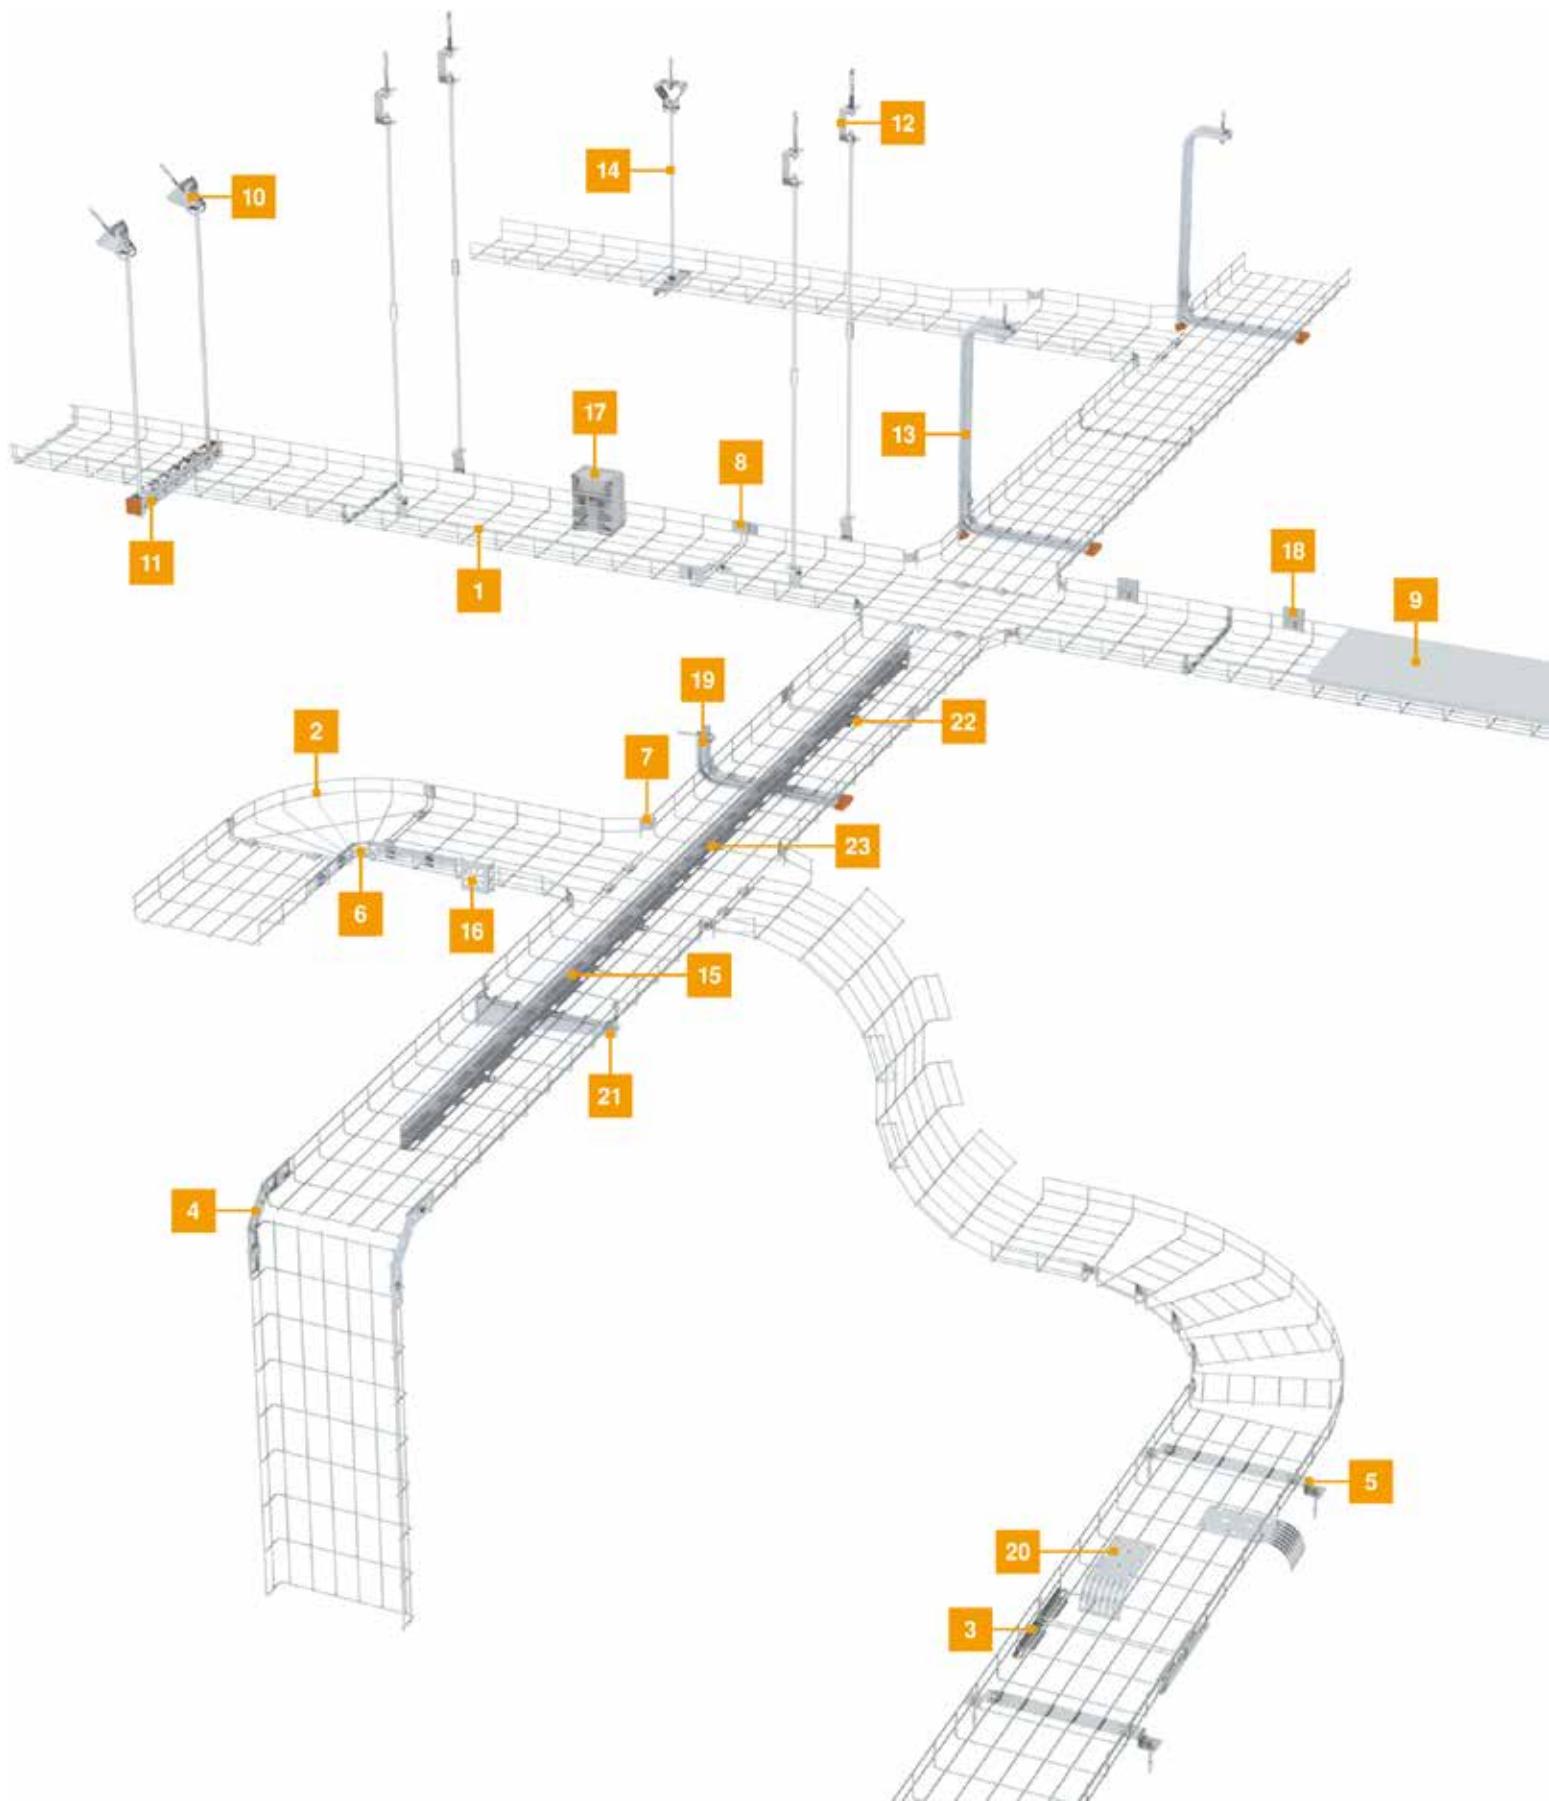

Function maintenance with GR-Magic®

Impressive range of accessories

In addition to providing quick straight connections, the innovative GR-Magic® range of accessories is also easy to handle and use thanks to its screwless connections. For example, the mesh cable trays can be flexibly installed on mounting rails using fastening clips or on wall and support brackets using clamping lugs. Cut mesh cable trays without moulded connectors are easy to join together with a quick connector, while barrier strips are fastened with a hold-down clamp and cable exit plates with clamping lugs.

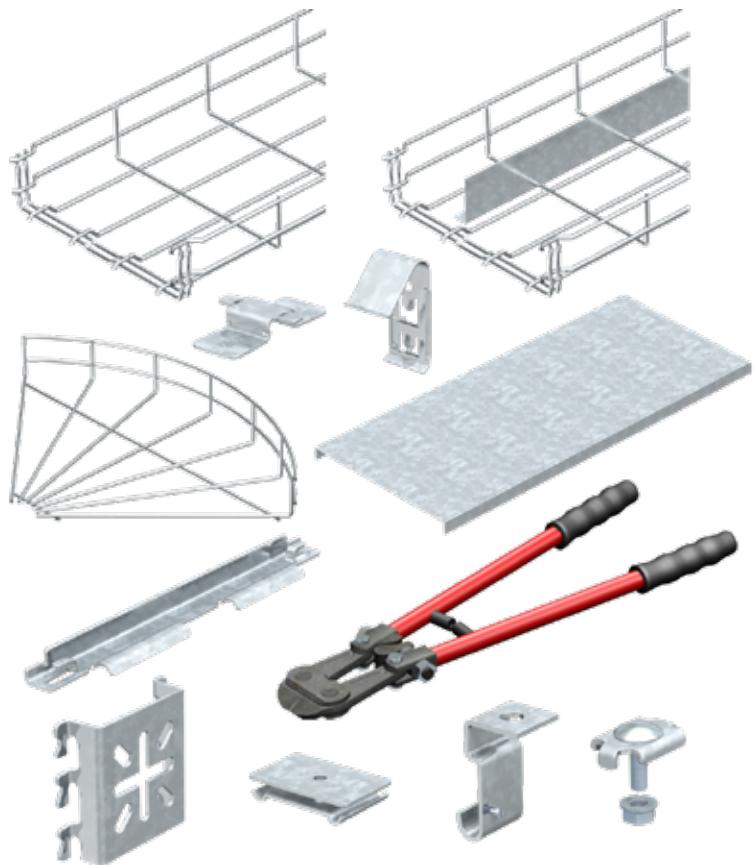

Installation principle

- | | | | |
|-----------|---------------------------------|-----------|--|
| 1 | GR-Magic® mesh cable tray | 13 | TP suspended support |
| 2 | 90° mesh cable tray bend | 14 | Central suspension, GMS |
| 3 | Mesh cable tray connector, long | 15 | Barrier strip |
| 4 | 90° mounting bracket | 16 | Mounting plate |
| 5 | Stand-off bracket | 17 | Fastening element for junction box |
| 6 | Slotted steel strap, bent | 18 | Wall and ceiling bracket |
| 7 | Corner connector | 19 | Wall and support bracket, TPSAG |
| 8 | Joint connector | 20 | Drop-out plate |
| 9 | Cover, unperforated | 21 | Wall and support bracket, AWG 15 |
| 10 | Ceiling clamp, variable | 22 | Clamping piece for separating retainer fastening |
| 11 | MS4121 mounting rail | 23 | Welded cable ladder systems |
| 12 | Ceiling bracket | | |

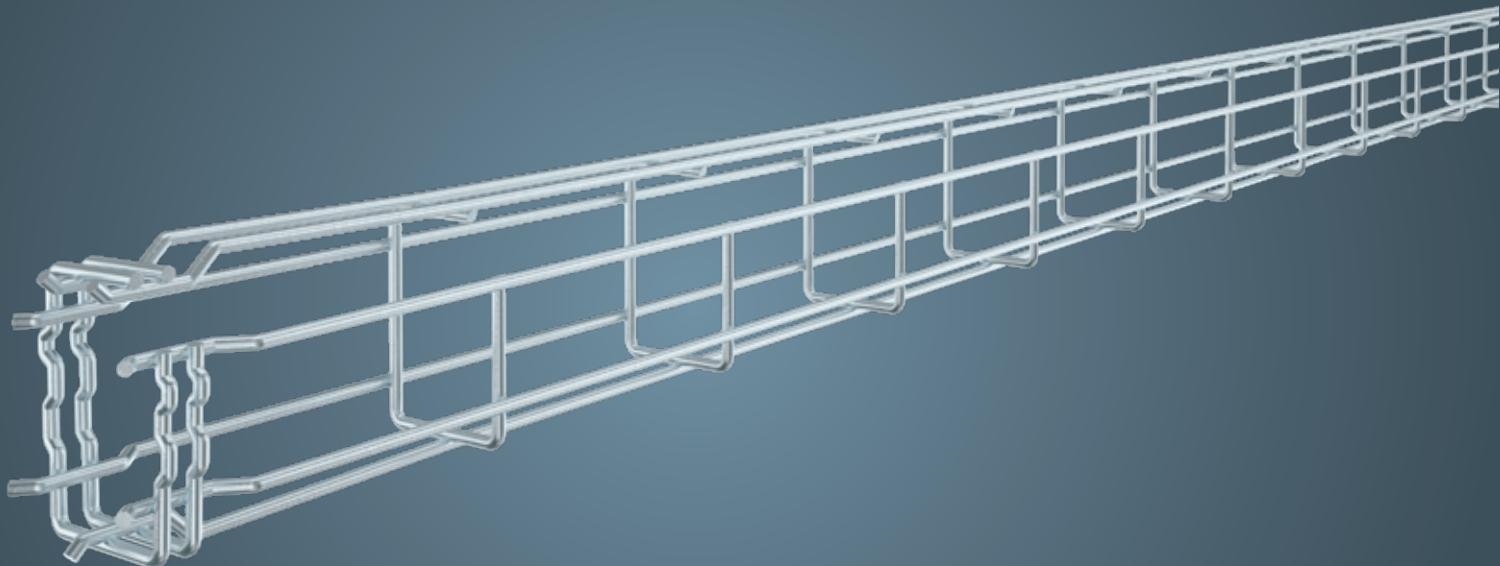

Magic down to the last detail

The system's effectiveness is provided by the perfectly formed mesh cable tray for screwless straight connection, complemented by the wide range of well-thought-out system components. The many lockable and clamp-on elements continue the basic principle of the Magic system down to the last detail. Exceptional ease of use is also a priority for all additional fastening and system components, for example when creating bends of different radii with special corner connectors.

GR-Magic® G mesh cable tray

The system for the direct wall and ceiling mounting

G FT A2 A4

Optimum room usage

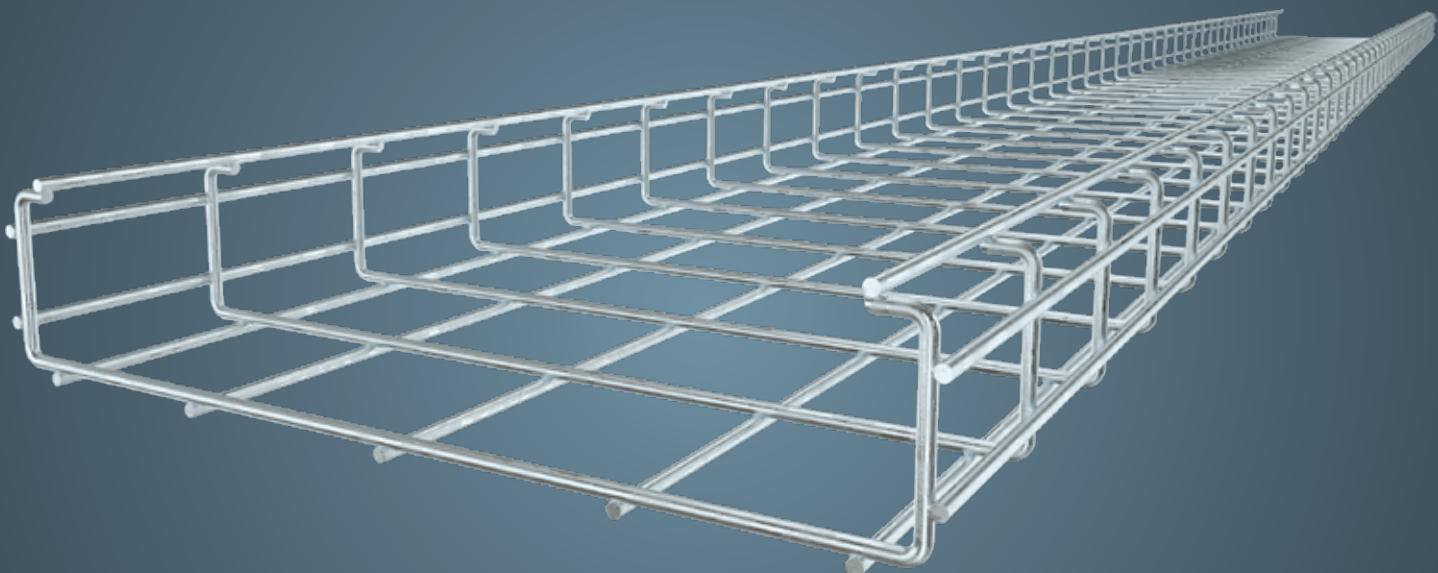

Even if space is tight, the Magic® G mesh cable tray can be mounted almost anywhere. It can be attached directly to walls and ceilings in almost any position. The mesh cable tray can thus offer optimum cable routing in false ceilings, server rooms and office buildings. This system also scores highly thanks to its screwless design.

Wide range of materials

In dry rooms, wet rooms, outdoor areas, the food industry or tunnel construction – the GR-Magic® has the right surface for any area. The product range runs from electrogalvanised and hot-dip galvanised right through to stainless steel variants.

SGR heavy-duty mesh cable tray

A tough cookie made from 6 mm wire

FT A2

110% more load capacity

The heavy-duty mesh cable tray of type SGR, made of 6 mm-thick wire in a U profile, unifies multiple benefits simultaneously. The strong wire design means that the SGR, with its low intrinsic weight, can withstand load capacities of up to 110% more than the comparable mesh cable trays of competitors and can thus also be used for larger support spacings of up to 4.0 m.

The mesh cable tray is available in three different surface versions. It is hot-dip galvanised and can be used in the industrial sector and in machine and system construction.

With three different side heights, it is possible to react very flexibly to different necessary cable volumes. The large grids mean that cables can be inserted and run out at any point.

In addition, the open structure prevents heat build-up and also the collection of dirt and dust is prevented to a great extent. The U connector GUV 6 in the surfaces FT, G and A2 is available for the heavy-duty mesh cable tray. This new heavy-duty mesh cable tray offers an all-round complete package for the sophisticated laying of cables in all different application areas.

C mesh cable tray

Maximum load capacity and versatility

G FT A2

The C mesh cable tray system from OBO Bettermann can fulfil the highest requirements for load capacities and versatility. The C shape allows support widths of up to three metres. With a side height of 50 mm and optimised accessories such as hold-down clamps, barrier strips or installation profiles, the system is the perfect complement to OBO's complete mesh cable tray portfolio. It is used both in industry and in all other areas of professional electrical installations.

Surface variety of the mesh cable tray

The mesh cable trays are available in a wide variety of surface designs that enable them to be used both indoors and outdoors. For indoors, OBO has developed the electrogalvanised surface further and made it even more visually appealing. The result is the new OBO "Titan look". This provides the mesh cable trays with an unmistakable, high-quality optical appearance, which closely resembles stainless steel – making it ideal for use in false ceilings and where in view.

The system's effectiveness is provided by the perfectly formed mesh cable tray for screwless straight connection, complemented by the wide range of well-thought-out system components. The many lockable and clamp-on elements continue the basic principle of the Magic system down to the last detail. Exceptional ease of use is also a priority for all additional fastening and system components, for example when creating bends of different radii with special corner connectors.

Material	Stainless steel A2
Designations	European material designation: 1.4301 American material designation: AISI 304
Special features	Welded components are also passivated; unwelded components are rinsed and degreased
Location of use	Industrial areas with high levels of humidity and aggressive atmosphere, food industry, chemical and pharmaceuticals industry

Material	Stainless steel A4
Designations	European material designation: 1.4401/1.4404/1.4571 American material designation: AISI 316/316L/316Ti
Special features	Welded components are also passivated; unwelded components are rinsed and degreased
Location of use	Buildings or areas with almost constant condensation and high levels of impurities, coastal or offshore areas with high levels of salt

Tested quality

The in-house BET Test Centre continually monitors and tests the quality of OBO products. Here, OBO simulates the loads that the mesh cable tray systems have to withstand on a constant basis. We determine the maximum load capacity and carrying capacity of the system, as well as its resistance to corrosion. We are able to prove standardised testing of EMC properties using test reports. In other words, OBO places paramount importance on safety.

The KTS testing system was specially constructed for the testing of OBO Bettermann cable support systems. Thanks to its continuous further development and adaptation to the latest requirements, it can offer comprehensive testing options. For example, the tests required by DIN EN 61537 can be carried out. These prove the safe working load (SWL) and therefore the reliable load-bearing capacity of the systems. Tested quality without compromise – made by OBO.

As flexible as your work

Mesh cable trays cannot always be routed lengthways. Depending on the application, it is necessary to overcome structural obstacles or to make unusual changes of direction. Horizontal and vertical As the OBO mesh cable trays can be cut to size as required and the system has an extensive range of accessories, it can be adapted to any structural conditions.

Mesh cable tray GR-Magic® 55

Mesh cable tray with shaped connector of side height 55 mm.
Magnetic shield insulation without cover 15 dB, with cover 25 dB.
No additional connection components are required for the mesh cable tray, it is simply interlocked. The grid width is 50 x 100 mm (exception: GRM 55/50 = 20 x 100 mm).

The connection and earthing terminal is used to reduce electrical resistance and therefore improves the electric conductivity in GRM mesh cable systems in the area of the joint. This allows fulfilment of the high demands in terms of the transition resistance according to, for example, NEMA and CSA. Furthermore, the connection and earthing terminal is compulsory when used as a protective conductor in a mesh cable tray system (national regulations have to be followed when creating such a system).
